

A02 CGM Health Measurement

BH66F2455/HT32F67595

Characteristics

- High level of integration: Integrated continuous glucose monitoring AFE circuit, requiring few external components
- Low power design: Average operating current 20.0 μ A @VDD=3V
- Low standby power consumption: Uses TMR Switch, standby current <20nA
- Miniaturized package: Module diameter only 21.5mm, suitable for wearable applications

Applications

Small stand-alone CGM, insulin pumps, CGM systems, etc.
